

Extend your Epic EMR with OnBase

Treating a patient quickly and effectively comes down to one thing – information. Clinicians and staff need access to all their patients' information at any time. But relying on an electronic medical record (EMR), even one as strong as Epic, to hold all of your organization's information means key content could be outside your reach. Not only does this waste physician and staff time, but takes away time spent with patients as well.

By integrating your Epic EMR with the OnBase enterprise content management (ECM) solution, all of a patient's information is immediately available in the Epic environment. More than 100 Epic customers use OnBase to securely store unstructured content – including paper, forms, faxes, clinical images and videos – and link it directly to their EMR. That way, clinicians and staff always know where to go for the information they need.

The Payoff

- Provides clinicians with a single, complete patient record
- Connects your IT investments and extends their value
- Gives physicians real-time access to patient information

Complete the patient record

Throughout the continuum of care, OnBase works with your Epic system to ensure a complete electronic record. At every phase – from scheduling to the patient visit and beyond – staff and clinicians have fingertip access to the information they need to deliver superior care and service.

Challenges

- The EMR is missing 25 percent of the patient record
- Disparate systems slow the flow of information and limit productivity
- Hunting down documents limits time spent with patients

CUSTOMERS
USE ONBASE

Based on a true API approach, the OnBase Integration for Epic provides functionality that enables seamless interaction with your EMR and clinical IT environment. Created specifically for Epic, the solution enables you to sign-on and retrieve documents, digital photos, EKGs and surgical videos directly from Epic, whether at the patient, order or encounter levels. Additionally, real-time synchronization with Epic provides access to the latest information no matter where you are in the health system.

Realize the full potential of ECM technology

The real strength of ECM is that it goes beyond simple document scanning storage and retrieval. OnBase lets you capture almost any form of content, from paper documentation to faxes to EDI transactions. Management and enforcement of retention policies becomes simple with OnBase records management functionality. You can easily maintain regulatory compliance with secure storage and role-based access. And best-practice implementation methodology from more than 1,400 lifetime healthcare customers ensures an ECM solution that aligns precisely with your needs.

Additionally, OnBase provides advanced workflow for automated document routing. Users receive notifications and access content within the Epic system. With OnBase, physicians complete deficiencies and sign documents remotely. Nurses and unit clerks document verbal orders and send alerts to physicians for signature. Hospital staff acknowledges changes in organizational policy documents.

Take your solution beyond the patient record

The ability to integrate with the clinical side is great, but OnBase wouldn't be a true enterprise solution if it stopped there. Patient information passes through several other departments and systems as well. For staff, constantly switching between applications causes slowdowns in everything from billing processes to answering patient inquiries.

Fortunately, OnBase easily integrates with multiple systems in addition to Epic. This allows you to unify every system your organization relies on, letting staff pull all necessary information from practically any application. They no longer have to waste time switching between systems, clinical or otherwise, for a patient's information. From the ER to HR, OnBase connects almost any solution and automates key processes in clinical, financial and administrative departments.

At every phase of patient care and service, the OnBase Integration for Epic provides clinicians and staff with fingertip access to clinical and financial content normally outside core HIT applications. As the ECM solution with the most Epic customers and experience, OnBase offers a proven solution that completes the patient record, eliminates reimbursement delays and enhances business processes.
