

OnBase Integration for Meditech

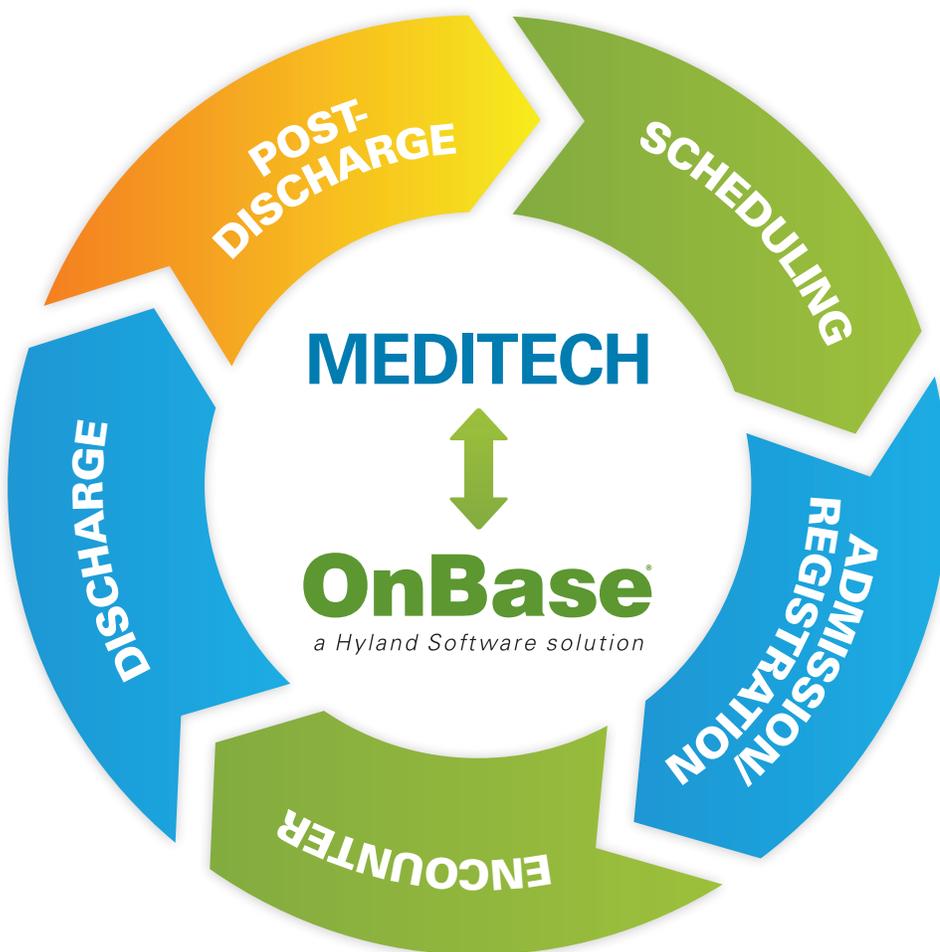

Create a stronger and more flexible Meditech solution

If your healthcare organization relies on a Meditech solution – whether it is Meditech 6.0, Magic or Client/Server – then it represents the backbone of your IT environment. But even a solution as reliable as Meditech can't do everything. The reality is that up to 25 percent of a patient's information exists outside your Meditech system. Without it, clinicians and staff run the risk of treating patients without the complete picture.

By integrating your Meditech system with the OnBase enterprise content management (ECM) solution, you remove that risk. OnBase creates a repository for the missing content and information and links it directly to Meditech. That way, clinicians and staff continue to work in the system they know. This adds further value to your existing IT investments without breaking your budget.

The Payoff

- Completes the patient record
- Enhances your existing IT investments
- Speeds and automates your organization's processes

Complete the patient record

Throughout the continuum of care, OnBase works with your Meditech system to ensure a complete electronic record. At every phase – from scheduling to the patient visit and beyond – staff and clinicians have fingertip access to the information they need to deliver superior care and service.

Challenges

- The EMR is missing up to 25 percent of the patient record
- Alternating between disparate systems wastes the time of clinicians and staff
- Manual processes slow the flow of patient information

100% COMPLETE PATIENT RECORD

Improve patient care with a more complete patient record

Hunting for unstructured content, like exam results and faxes, wastes time that clinicians and staff could spend with patients. Without speedy access to information, providing quality care is almost impossible. Clinicians need to access the patient file as quickly as possible.

Working with the Meditech EMR, OnBase helps put the missing content – from paper forms and faxes to EKGs, digital photos and surgical videos – in the right hands, quickly. OnBase creates a central repository with secure, role-based access, allowing staff to access all patient information from directly within your Meditech system. Clinicians and staff can then abandon the hunt and focus on the patient.

Go beyond scanning and archiving

Creating a central repository for all patient information is a great start, but OnBase, a true enterprise solution, transcends simple scanning and archiving. Comprehensive capture technology allows for easy access to paper and electronic records. Document retention and records management solutions help you manage and enforce retention policies and aid in maintaining compliance with regulatory initiatives.

The biggest difference comes when you automate processes. OnBase offers user-friendly workflows that help healthcare organizations automatically route documents to the right people at the right time. For example, new patient information gathered at registration automatically becomes part of the patient file. Physicians can complete deficiencies and sign documents remotely. And when changing hospital policies, you simply make changes to the document stored in the central repository and OnBase sends the update to everyone affected.

Eliminate content gaps throughout the organization

Although deploying OnBase ECM throughout the organization yields the greatest potential return on investment, depending on your budget, an enterprise-wide deployment may not be an option. Flexible and scalable, you can implement OnBase at a pace that makes the most sense, targeting departments with the greatest need. Hosted and templated solutions are also available, reducing the initial cost while still offering a proven path to value. And best-practice implementation methodology from more than 1,400 lifetime healthcare customers ensures an ECM solution that aligns precisely with your needs.

OnBase supplies the flexibility and configurability necessary for an enterprise-wide implementation. It allows you to integrate with Meditech department-by-department, so you can start small and expand as you see necessary. Additionally, OnBase allows you to unify previously disconnected, disparate systems, ensuring immediate access to relevant information regardless of the application.

The OnBase Integration solution for Meditech creates a complete enterprise solution for every department in the hospital. By completing the patient record and automating processes, it helps support patient care and service, from admissions to discharge and beyond.
