

A Banner integration without the frustration

Slow decision-making processes cost your school more than time. Your admissions, financial aid and registrar's offices are under the gun and look to IT for help. With limited manpower and fixed resources, you need to make better use of your Banner student information system without overextending the IT department.

The out-of-the-box functionality of OnBase makes fast work of implementation. Its drag-and-drop configurability eliminates the need for custom coding or scripting. By integrating with Banner at the data-level, the two systems share information when they need to, where they need to, creating a seamless, real-time exchange so that mission-critical decisions are based on the most accurate, up-to-date data available. The admissions, financial aid and registrar's offices won't be the only ones saying goodbye to time-consuming, labor-intensive processes.

*"We have a **constant flow of information** being exchanged between OnBase and Banner. This provides staff with the most recent and updated information we have for a student. Students **no longer have to wait on answers** to their admission and financial aid questions."*

– Michael Seeley
Associate Director of Undergraduate Admissions
University of Notre Dame

**UPDATES
= REAL
TIME**

No code required

It's a dog-eat-dog world out there. See that your institution stands out from the pack without adding to your to-do list.

The bi-directional flow of data allows up-to-date information to travel easily between OnBase and Banner. Documents are indexed and retrieved by clicking a button from within the Banner user interface. Automated processes ensure mission-critical information arrives in real time, so that decisions are based on the most current information available whether processing a student application, verifying a financial aid package or evaluating a transcript.

Admissions: May the first acceptance letter win

With increasing applications and decreasing resources, admissions offices must find ways to process applications quickly to drive tuition revenue and secure best-fit students.

Without requiring any scripting, the OnBase integration with Banner helps admissions offices produce faster and more accurate decisions, automatically indexing documents and information, updating the Banner checklists, and electronically routing the complete application to the appropriate counselors.

Financial Aid: Make them an offer they can't refuse sooner

Labor-intensive verification bogs down financial aid decisions. Between record applicants and reduced amounts available for awards, it's important that timely offers go to the right students.

Through real-time information exchange, OnBase frees financial aid counselors from administrative tasks, and financial aid packages go out sooner – often in tandem with the admissions office's decisions. As key verification data comes in, OnBase updates the checklist in Banner. The complete file is automatically routed to the appropriate counselor's inbox for review.

Registrar's Office: Give credit where credit is due

Increasingly students arrive with credits from other schools. Reviewing transcripts can be tedious and time-intensive, causing delays in course registration, reduced enrollment and revenue loss.

In a fraction of the time it would take to manually review a transcript, OnBase integrates with Banner to support a degree audit, electronically capturing accurate data and searching your articulation database for existing course equivalencies. It'll even search external sites, like CollegeSource® for matches. If no match is found, courses are routed for review. Once approved, the articulation database can be updated automatically. And, it all happens without a single line of custom code or script.

But wait, there's more

The benefits of OnBase extend beyond the admissions, financial aid and registrar's offices. Flexible and scalable, OnBase integrates with a wide range of line-of-business applications and core enterprise systems to meet the needs of departments across your entire campus. With OnBase, you'll optimize your IT investments while keeping administrative demands on IT at a minimum.
