

The OnBase Payoff

- Streamline incident logging with simple data entry while in the field
- Improve access to information from with filters and search capabilities
- Accelerate implementation with quick installation and simple officer training

Streamline incident logging and management

From public safety to crime reduction, your police department's top priorities rely on timely access to critical information. Officers need a simple way to enter and access important incident-related details to make better, informed decisions.

OnBase streamlines the incident logging process, allowing all personnel to easily log field activities, capture related media and access relevant information – whether in the field or at the station.

Simplify incident entry and access to information for officers in the field

With OnBase, your officers easily log incidents on their laptops while on patrol – adding relevant information and, if necessary, marking a log as 'high priority' for simple retrieval and future reference. Along with entering data, officers easily upload photos or videos taken at the scene, which are then automatically linked to the incident entry. In addition, to effectively prepare before responding to an incident, they can search for an individual's name or the address of the crime to see if this individual or location was involved in previously logged events.

For example, when an officer responds to a call detailing possible criminal activity, he or she can log the location and details of the incident without leaving the patrol car. Photos taken at the site or video captured with the dashboard camera are immediately uploaded to OnBase and automatically associated with the logged incident. Officers can also view media and documents associated with past incidents, for reference, while completing new logs.

While in the field, if an officer witnesses a crime or notes pieces of intelligence that need to be verified by another officer, the second officer simply opens the incident log and checks a verification box. Additionally, to support compliance with federal regulations, OnBase automatically deletes logs that include pieces of intelligence that have not been verified after a year.

Improve information retrieval and organization for shift change briefings

Keeping officers well-informed is imperative to their safety while in the field. So, as supervising officers brief them before their shift, it is critical that the supervisor has the most important, up-to-date information at hand.

OnBase facilitates more efficient shift change briefings, allowing personnel to quickly retrieve and organize critical information. During and after each shift, supervisors easily filter through incident logs by keyword or by priority, as well as search through the logs to find specific text in the officers' notes.

OnBase also records a history of interactions with the logged content so personnel can easily review who entered, edited or verified the information. This allows supervising officers to better organize the logs presented during shift change meetings and reduces the risk of dangerous oversights resulting from a lack of organized, complete information. To provide all officers with a comprehensive view, supervisors can also easily reference and share any related documents or media as they discuss the incidents at the briefings.

Ease implementation and administration

Leverage your existing OnBase investment to improve incident logging. The add-on solution can be quickly implemented without additional IT intervention. And, with a simple and intuitive interface, the solution requires minimal user training for officers, regardless of whether they have previous experience with OnBase.

Equip your officers with the tools they need to continue to keep the public safe. Built using OnBase Case Manager, an incident management solution streamlines daily logging of patrol activities while improving access to and organization of important data and documents.
